

Panel Mount Tachometer Model DT-5TP

Instruction Manual

Features

This microprocessor-controller digital tachometer can be used in any direct rpm application where no special gears or generators are required. Here are some of its outstanding features:

- Mounts easily — no brackets or screws required.
- Any AC line voltage between 85 and 264 (50/60 Hz) can power the unit.
- Parameters are easily set via front panel membrane switches.
- Parameter settings are stored in a nonvolatile memory.
- Pulses per revolution range is 1 - 9999.
- Signal LED on front panel.

Operational Precautions

- If the unit is used in a caustic environment, we suggest you use a NEMA 4X enclosure.
- Keep unit free of vibration and shock.
- When installing unit, keep power and sensor wires separate. Tie cable shield to terminal E (earth ground).
- After inserting wires, tighten terminal screws securely.

Dimensions (mm)

Installation

Our 1/8 DIN case design eliminates the need for brackets and screws for installation. With the tachometer in a level position, insert it into the panel cutout. Gently push the face of the unit until the front bezel locks into place. If the tachometer case is loose, adjust the integral bracket with the enclosed tool.

Mounting Bracket Adjustment

Thickness of Panel

1.2 – 1.6 mm
1.8 – 2.5 mm
2.8 – 3.6 mm
4.0 – 4.5 mm
5.0 mm

4th groove
3rd groove
2nd groove
1st groove

Removing Unit

From the rear of the tachometer, alternately push the unit from the left and right. This will free it for easy removal.

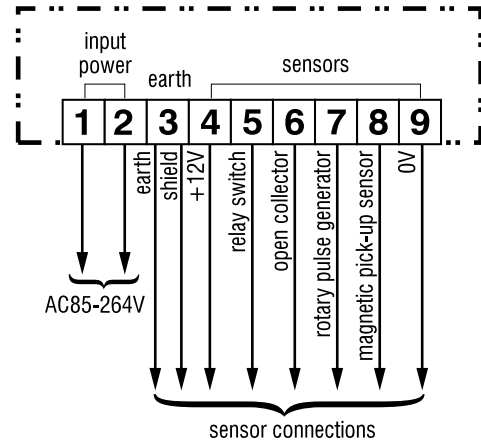

Sensors

Shimpo offers a large selection of sensors to meet your application needs. The chart below shows the optimum sensor to use when designing your system. Please call us for more information.

SENSOR	FREQUENCY TYPE	TERMINAL NUMBERS	FREQUENCY OR RPM RANGE	OPERATION TEMPERATURE
RE1B-60C RE1B-600C RE1B-1000C	Rotary Pulse Generator	3, 4, 7, 9, 3, 4, 7, 9, 3, 4, 7, 9,	0-5000 rpm 0-3000 rpm 0-1800 rpm	+14° F to +122° F +14° F to +122° F +14° F to +122° F
BI2-S12 DJ2-G SE-G	Proximity Switch Proximity Switch Proximity Gear Sensor	4, 6, 9, 4, 8, 3, 4, 7, 9,	0-2 KHz 0-1 KHZ 0-8KHz	-13° F to +158° F -4° F to +140° F -4° F to +158° F

Switch Closure	Relay or Solenoid	5, 9,	<20 Hz	

* explosion proof

Connections

- 1&2 Line voltage input. AC voltage must be between 85 and 264 volts.
- 3 Earth ground. Connect all cable shielding to this terminal.
- 4 12 VDC 50mA max. This sensor power supply is for any sensor that requires external power
- 5 Switch closure input. To be used with a relay or solenoid. The input frequency must be less than 20Hz.
- 6 For use with open collector sensors. Connect the sensor's signal output wire. No need for an external pull-up resistor.
- 7 Terminal to accept signals from rotary encoders or pulse generators.
- 8 Standard input terminal for magnetic pick-ups and proximity switches.
- 9 Signal ground or common.

Mode Selections

The DT-5TP operates in two modes. Mode 1 is programmed when setting up rpm applications, and mode 5 is for diagnostic testing:

Mode	Function	Application
1	Rate measurement	Direct rpm measurements
5	Self test	Diagnostic test of LED display and input circuitry

Setting Modes

1. Apply any voltage between 85–264 VAC (50/60Hz) to terminals 1 and 2. The display will show .
2. Press **mode** and **data set** keys for at least 5 seconds.  will then appear.
3. Press the **increment** key to select the desired mode. The display will shift between mode 1 and mode 5.

4. Press **mode** key to activate mode 1 or mode 5.

Mode 1: Rate Measurement

The DT-5TP can directly measure any rotational rate speed. The two parameters listed below may need to be changed during system set-up.

Parameter	Function	Factory Setting	Range
1	Pulses per revolution of sensing system	1p/r	1–9999
2	Decimal point	none	0–4th place

Setting Parameters

Parameter 1: Pulses per Revolution of Sensing Gear

Here is how to change the parameter from 1 to 60 pulses per revolution ("p/r"):

1. Set unit to **mode 1**.
 (factory setting)
2. Press **mode** key.

3. Press **shift** key to select the desired digit.

4. Press the **increment** key 6 times.

5. Press **shift** key.

6. Press the **increment** key 9 times.

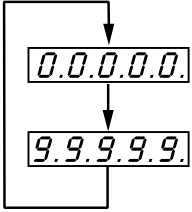

Parameter 1 is now set for 60p/r.

Parameter 2: Decimal Point

1. Press **mode** key.

 2. Press **shift** key to select position of decimal point.

- Parameter settings are now complete. Press **data set** key to begin counting.
- 

Mode 5: Self Test

This mode lets you check the LED display and input circuitry.

- MODE
DATA SET
- After disconnecting sensor, press **mode** and **data set** keys for five seconds.
- ▲ display
- 
- Press **increment** key until display shows mode 5.
 - Press **mode** key to test display segments and decimal points.
- MODE
- Press **mode** key. The display will show *1000* and the signal *LED* will flash.
- is
- Press the **data set** key. The unit now ready for counting.

Specifications

Model	DT-5TP
Mode	Rate Measurement
Display Range	0.0000–9.9999 0.000–99.999 0.00–999.99 0.0–9999.9 0–99999
Measuring range	10–99999 rpm (at 1p/r), 0.2–30000 rpm (at 60p/r)
Display period	1 sec. (1 p/r input 60 rpm or over) 1–6 sec. (1 p/r input 10–60 rpm)
Display	Red LED (0.56" or 14.2 mm high)
Time base	Controlled by a 4.194304 MHz crystal
Accuracy	±0.008% ± 1 digit
Measuring system	CPU controlled
Input no. of p/r	1–9999 (programmable)
Input signal characteristics	Sine wave–max frequency 10 KHz Square wave–max frequency 30 KHz Open collector–max frequency 30 KHz Contact closure–max frequency 20 Hz
Input signal amplitude	Sine wave (0.3–30 VP–P) Square wave LO: 0–1.5 V, HI 4–30 V
Input impedance	Approx. 10 k ohms
Voltage output	12 VDC ±5% (50 mA max) to power sensors
Ambient temperature	32°–113° F (0°–45° C)
Power consumption	1W
Voltage requirements	85–264 VAC (50/60Hz)
Dimensions	3.46"L x 1.88"H x 3.78"W (88L x 48H x 96W mm), includes bezel, fit 1/8 DIN cutout
Weight	0.55 lbs (250g)

Error Codes

Display	Type of Error	What to Do
EE-02	Internal memory	Press data set key. Interrupt power at terminals 1 and 2.
EE-03	Memory recall	<ol style="list-style-type: none"> Press data set key. Press increment key. Display should show <i>11111</i> Press data set key. Display should show <i>22222</i> Press shift key. Display should show <i>33333</i> Press mode key. Display should show <i>44444</i> and reset to <i>0</i>. If display goes to <i>11111</i> or <i>22222</i> and locks up, turn power off and on again and repeat above steps.

Switch Closure	Relay or Solenoid	5, 9,	<20 Hz	

* explosion proof

Connections

- 1&2 DC input terminals. Power required: 9-35 VDC, 1W.
- 3 Earth ground. Connect all cable shielding to this terminal.
- 4 12 VDC 50mA max. This sensor power supply is for any sensor that requires external power
- 5 Switch closure input. To be used with a relay or solenoid. The input frequency must be less than 20Hz.
- 6 For use with open collector sensors. Connect the sensor's signal output wire. No need for an external pull-up resistor.
- 7 Terminal to accept signals from rotary encoders or pulse generators.
- 8 Standard input terminal for magnetic pick-ups and proximity switches.
- 9 Signal ground or common.

Mode Selections

The DT-5TP operates in two modes. Mode 1 is programmed when setting up rpm applications, and mode 5 is for diagnostic testing:

Mode	Function	Application
1	Rate measurement	Direct rpm measurements
5	Self test	Diagnostic test of LED display and input circuitry

Setting Modes

- Apply any voltage between 9–35 VDC to terminals 1 and 2. The display will show .
- Press **mode** and **data set** keys for at least 5 seconds.  will then appear.
- Press the **increment** key to select the desired mode. The display will shift between mode 1 and mode 5.

- Press **mode** key to activate mode 1 or mode 5.

Mode 1: Rate Measurement

The DT-5TP can directly measure any rotational rate speed. The two parameters listed below may need to be changed during system set-up.

Parameter	Function	Factory Setting	Range
1	Pulses per revolution of sensing system	1p/r	1–9999
2	Decimal point	none	0–4th place

Setting Parameters

Parameter 1: Pulses per Revolution of Sensing Gear

Here is how to change the parameter from 1 to 60 pulses per revolution ("p/r"):

- Set unit to **mode 1**.
 (factory setting)
- Press **mode** key.

- Press **shift** key to select the desired digit.

- Press the **increment** key 6 times.

- Press **shift** key.

- Press the **increment** key 9 times.

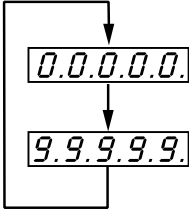

Parameter 1 is now set for 60p/r.

Parameter 2: Decimal Point

- Press **mode** key.

 - Press **shift** key to select position of decimal point.

- Parameter settings are now complete. Press **data set** key to begin counting.

Mode 5: Self Test

This mode lets you check the LED display and input circuitry.

- 

1. After disconnecting sensor, press **mode** and **data set** keys for five seconds.
- 
2. Press **increment** key until display
- 

shows mode 5.

3. Press **mode** key to test display

segments and decimal points.
- 
4. Press **mode** key. The display will show *1000* and the signal *LED* will flash.
- 
5. Press the **data set** key. The unit is now ready for counting.

What to Do

Press **data set** key. Interrupt power at terminals 1 and 2.

1. Press **data set** key.

2a. Press **increment** key. Display should show *11111*

2b. Press **data set** key. Display should show *22222*

2c. Press **shift** key. Display should show *33333*

2d. Press **mode** key. Display should show *44444*

and reset to *0*. If display goes to *11111* or *22222* and

locks up, turn power off and on again and repeat above steps.
